

# Development and Dissemination of Flood Tolerant and *Yellow Vein Mosaic Virus (YVMV)* Resistant Okra Hybrids for Southern Regions in Nigeria

Ugwu Emmanuel

West Africa Centre for Crop Improvement  
University of Ghana/Univ of Nigeria

## Design target

Flood tolerant and YVMV resistant okra hybrid with longer shelf life for farmers and consumers

Ugwu Emmanuel is an MPhil scholar at WACCI, University of Ghana. His research interest focuses on improvement and evaluation of early maturing flood tolerant and disease resistant okra for farmers and the Nigerian Market. He holds a BS Agric degree in Crop protection where he opted to do his project in plant breeding and evaluated the photoperiodic activities of thirteen okra (*Abelmoschus esculentus*) genotypes in Nigeria. Upon graduation from WACCI, he plans to partner with private and public seed sectors to release okra hybrids that are resistant to flooding and Yellow Vein Mosaic Virus (YVMV) with longer shelf-life and other desirable traits needed by farmers and consumers.

## Product Profile design team

Step 1		
<b>PP Design Team Lead/Champion</b>	Ugwu Emmanuel	
	West Africa Centre for Crop Improvement	
PP Design Team		
Person	Area of Expertise	Name of organization
Ugwu Emmanuel	Seed Scientist	University of Nigeria,
Enyi Ikechukwu	Breeder	Nsukka/WACCI, UG
Isiaka Abiodun	Breeder	University of Nigeria,
Ezea Augustus	Plant Pathologist	Nsukka
Chinaka Onyekachi	Plant Entomologist	Federal University Oye-

## Step 2

Product profile descriptors	
<b>Product profile name</b>	Flood tolerant and resistant okra hybrids for Nigeria
<b>Crop</b>	Aqua Okra ( <i>Abelmoschus esculentus</i> )
<b>Country</b>	Nigeria
<b>Geographic regions</b>	South east, South-South, South
<b>Market segment and positioning</b>	Fresh okra market. Early maturing, flood tolerant, high yielding, disease resistant with prolong shelf-life
<b>Name of target variety to be replaced</b>	Uhie, Clemson, Agwu early <b>Strength:</b> <b>Uhie-</b> high Resistance to disease. <b>Clemson Spineless-</b> early maturing, high yielding and spineless. <b>Agwu early-</b> Early maturing <b>Weakness:</b> <b>Uhie-</b> late maturing, low yield, possess spines. <b>Clemson spineless-</b> low disease resistant, short duration, easily affected by flood <b>Agwu early-</b> low resistance to pest and disease, low yield
<b>Date PP created</b>	02/03/2023

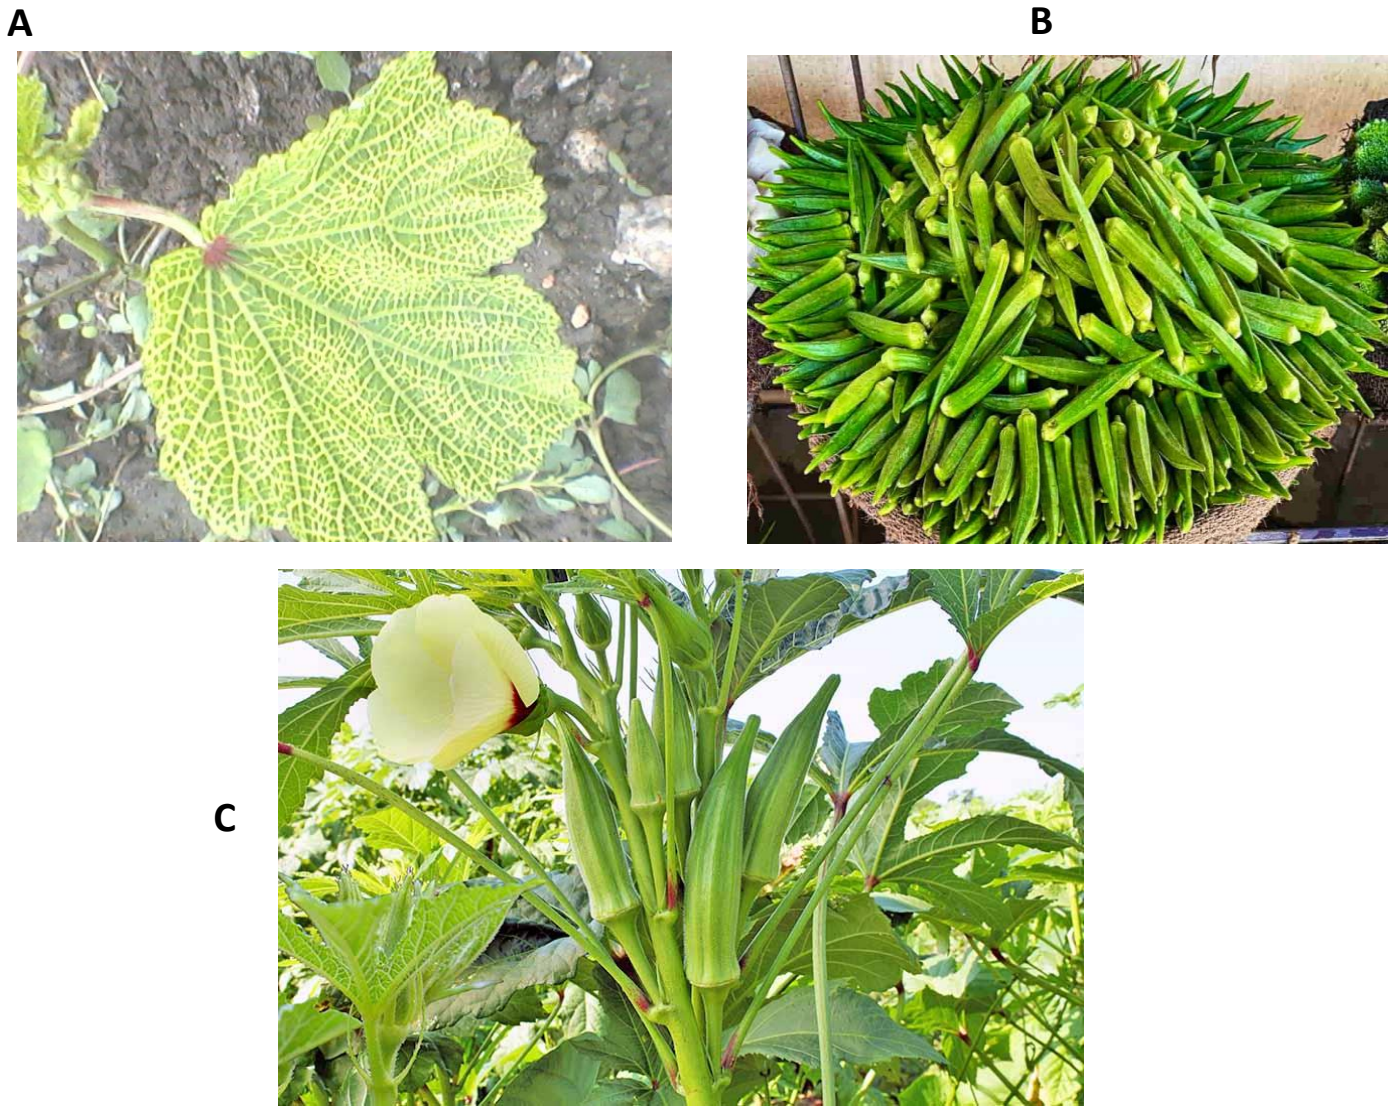

Target client and use	
<b>Value chain primary clients/customers</b>	Farmers, Market sellers, retailers, transporter and consumers
<b>Market scale</b>	House hold, local and regional
<b>Use</b>	Food (salad, stew, sauces, soup)
<b>Type of processing</b>	None (fresh), cooked
<b>Market class</b>	Small to medium okra

Target crop producers and production system	
<b>Number of farmers</b>	500-1200
<b>% ratio: male to female farmers</b>	42-49% male: 51-58% female
<b>Production system</b>	Open field (off season)
<b>Area of production system</b>	300-455ha
<b>Growth habit</b>	Determinate Okra (erect plant)
<b>Expected level of inputs</b>	Medium-fertilizer, crop protection(low)
<b>Typical yield range of target system</b>	1.6-6t/ha
<b>Cropping system</b>	Continuous monocropping
<b>Mechanization</b>	Mechanized planting, chemical method of weed management and Manual harvesting
<b>Agroecological zone(s)</b>	mangrove and rain forest zone
<b>Total vegetative propagation material market</b>	480-2730kg

Variety technical specification

Step 3

Client/customer	Driver	Trait category	Preference group: Women (W) Men (M) Youth (Y) W+M+Y (All)	Trait demand classification: 1. Essential/ "must have" 2. Niche opportunity 3. Added-value 4. Winning trait	Target traits	Trait description (Quantitative measures)	Name of benchmark variety	Performance required compared to benchmark variety <, =, > etc.
Farmer	Productivity	Yield	All	1	Fresh fruit weight	Average fruit weight >40g	Uhie	>
			All	1	1000 seed weight	Seedweight >=1000kg	Clemson	>
			All	1	Number of fruit	Average nber of fruits >1,111,110/ha	Agwu Early	>
		Biotic stress resistance	All	4	Yellow vein Mosaic Virus resistance	1-10 scale: High(7)	Uhie	>=
			All	4	Jassid resistance	Jassid per leaf <1.84	Agwu Early	>
		Abiotic stress tolerance	All	4	waterlogging tolerance	Plant root submerged >15 days	Clemson	>
	Crop management and harvesting	Plant architecture	All	1	Plant height and stem branching	Erect plant with moderate branching, plant height of 65-120 cm	Uhie	<
	Market value and price	Fruit size	All	1	Individual fruit weight	Average minimum: 40g	Agwu Early	>
		Crop duration	All	1	Early maturing	Sowing to maturity of first fruit: 50 days	Agwu Early	=
		Post-harvest storage	Storage-life	All	4	Longer fruit shelf life	Storage without deterioration >3-6 days	Agwu early
Transporter	Durability and cost	Transportability and storage	M	4	Fruit storage time	Retail quality before deterioration >3-6 days	Agwu Early	>
Consumer	Satisfaction	Taste	W	3	Palatability (mucilage content)	Mild taste (moderate mucilage content)	Uhie	<
		Appearance	W	1	Pod colour	Dark-green colour pod	Uhie	>
		Shelf-life	All	3	Fruit freshness	Nber of days before wrinkling >3-6 days	Agwu Early	>
Retailer	Sales and profit	Shelf-life	All	4	Longer shelf life without refrigeration	Greater than 3-6 days	Agwu Early	>

Contaminated Yellow Vein Mosaic Virus (YVMV) Okra leaf (A) and fruit (B) along with healthy Okra plant and fruit (C)

***“Understanding what traits okra farmers and consumers want are critical to plant breeding decisions and seed industries. This is made possible through the Demand-Led Breeding approach which in turns gives rise to product profile that reflects the desires of farmers and consumers”***
